That is the last day to upgrade to
Windows 10 for free

A couple of questions

- Who has already upgraded to Windows 10?
- AND did you make a complete system backup before you did the Windows 10 free upgrade?
- Do you like it?
- What if you want to go back?

Types of Backups

- **Incremental Backup**- A security copy that contains only those files that have been altered since the last full backup.
- **Differential Backup**- A differential backup is a cumulative backup of all changes made since the last full backup, i.e., the differences since the last full backup. The advantage to this is the quicker recovery time, requiring only a full backup and the last differential backup to restore the entire data repository.
- **System Backup**- A system backup is the process of backing up the operating system, files and system-specific useful/essential data.
- Backup is a process in which the state, files and data of a computer system are duplicated to be used as a backup or data substitute when the primary system data is corrupted, deleted or lost.
- We will discuss System Backups today. The two other types of backups will not be useful to us if we need a complete full restore of a prior operating system.

Backups and Physical Security

When was the
last time you
backed up
your
computer?

**Who is
this
guy?**

Here
is a
hint.

Francis Ford Coppola

Director, producer and screenwriter.
Godfather Movies, Apocalypse Now,
Patton and Many Others.

Did an excellent job of backing up his work from a laptop to an external storage drive.

Until his house was broken into and his laptop and backup drive were stolen.

Losing twenty years of his creative work.

Backup Hardware Solutions

Prices on Bestbuy.com as of
02/29/2016

- Backing up to the hard drive of your computer. Good idea? Partly.
- USB “Thumb” Drive- Too Small for Our Purposes

- DVDs? Probably Not!
- External Hard Drive- YES!

- SanDisk Cruzer 8GB USB 2.0 Flash Drive - Black \$4.99
- SanDisk Cruzer 16GB USB 2.0 Flash Drive - Black \$5.99
- SanDisk Cruzer 32GB USB 2.0 Flash Drive - Black \$8.99
- SanDisk Cruzer 64GB USB 2.0 Flash Drive - Black \$14.99
- SanDisk Ultra 128GB USB 3.0 Flash Drive - Black \$27.99
- Toshiba Canvio Basics 1TB External USB 3.0 Portable Hard Drive \$59.99
- Toshiba Canvio Basics 2TB External USB 3.0 Portable Hard Drive \$84.99

What about the “Cloud”?

**Can be expensive, and
needs Internet access
most (all?) of the time.
Most secure physically(?)**

**If you have a Microsoft
Account, or a Google
Account/Email, each one
gives you 15 GB (fifteen
Gigabytes). FOR FREE!**

**15 GB will store about
3750 songs or almost two
million pages of text.**

Three programs were tested for this presentation

AOMEI Backupper Standard

EaseUS Todo Backup Free

Macrium Reflect

(3.5MB Installer file, took a LONG time to download the 571.1 MB program).

Windows 10 Tool

Go to Control Panel >

File History >

System Image Backup >

Next you can choose to:

Create a System Image or

Create a System Repair Disk

See the article from

HowtoGeek in the web links.

What is
already
available in
Windows?

The three programs were installed on this computer-
Acer Model 5742-7620 Laptop
Windows 10- 64 Bit
4GB Memory.

An external hard drive was the backup destination-

Toshiba Canvio Basics 1TB External USB 3.0 Portable Hard Drive.

Let's Take a Quick Look at Each Program.

Backup run Times

Program Name	Program Estimated Time Mins		Start Time	End Time	Actual Time in Mins
AOMEI Backupper Standard	13		11:02	11:16	0:14
EaseUS Todo Backup Free Edition	7		11:41	11:56	0:15
Macrium Reflect Free Edition	15		12:28	12:45	0:17
16:35 per the program					

What about a disaster? Or you want to go back?

- **Bare-Metal Restore**- Bare-metal restore is a technique in the field of data recovery and restoration where the backed up data is available in a form which allows one to restore a computer system from "bare metal", i.e. without any requirements as to previously installed software or operating system.
- This is the type of restore you would need to do if your hard drive failed mechanically, or if you wanted to restore a prior operating system.

A “Bare Metal”
Restore was
performed.

First, *all files* were
completely
destroyed on the
C: drive using the
KillDisk utility.

The full drive erase
(297GB) took 1 hr
15 min. 22 sec.

EaseUS Todo Backup Was Used to Perform the Drive Restore

- The Toshiba external hard drive was connected, and the system was booted from the EaseUS Emergency Disk (CD) that was created after the program was installed.
- The time to restore the full 297 GB Partition With 36.1 GB of data was 35:19.
- Disconnected the external drive, ejected the CD, then rebooted. Success!

Each program has good features

Windows System Image backup is OK.

AOMEI and EaseUS Created restore CDs that are Linux based (Linux to restore Windows?).

Macrium Reflect created a Win PE (Preboot Environment) CD. LOTS of features, maybe a *little* too much for a new user.

Both EaseUS and Macrium backups can be browsed like a regular drive, to copy and restore files. AOMEI did not do this.

**Thank you for
your attention.**
